

AutoCAD Files Import Tool

Solution

- A fully automated batch import tool for AutoCAD files into EPDM along with data card attributes mapping from external system (e.g., ERP) using Access database.

Features

- Batch copy/check-in AutoCAD files from a network drive into EPDM, while mimicking identical folder structure in EPDM
- Maps external enterprise system data to EPDM data card attributes
- Maintains detailed log files for migration events to facilitate data verification, issue identification and trouble-shooting
- ASCII/XML flat list data from any enterprise system is loaded in Access to support variable mapping
- Mappings and variables are configurable
- User can specify source network location to copy from

Benefits

- Automated migration saves project roll out time and cost
- Increase data integrity by minimize user errors while inserting files manually
