

Batch Printing and Neutral Format File Generation Tool

Solution

A tool for batch printing and generating neutral format files for use in EPDM events and workflows

Features

Neutral Format Generation

STEP files are created for Models

PDF files are created for Dependent Drawings

ZIP files are created for the STEP and PDF files, each with the respective source document

Output Directory Configuration

Specifies the location for the tool output files

Intuitive File Naming Convention

Generated files are named according to the <part number>_”revision”.format convention

Benefits

- Supports external business processes and allows file exchanges despite site, web, and network security policies
- May be used to generate design snapshots
- May be used for backups

Note

Tool may be converted to a standalone application or a batch server
